

Intellectual Property Management Policy

1. Intellectual Property Strategy

The patent strategy of Brogent Group focuses on invention patents that have undergone official examination and have a longer duration of rights as its core strategy, and the ultimate goal is to create global competitiveness through patents. Within the framework of the same core technology and its auxiliary technologies, Brogent Group have utilized a collection of singular/multiple patent applications, covering various markets or regions, timeframes, technological scopes, depths, and breadths. Brogent Group is therefore able to strengthen its technological leadership position through the patent protection network.

2. Intellectual Property Management System

Brogent Group ensures its intellectual property rights such as patents are acquired in accordance with relevant systems through the establishment and promulgation of "Intellectual Property Management Regulations", "Technical Proposal and Patent Application Maintenance Management Regulations" and "Research and Development Operation Management Regulations". The regulations ensure the quality of operations and execution during the application process. Additionally, Brogent Group establishes a patent approval reward system to increase morale among creators and engineers and encourage them to proactively propose technical proposals. Inventors and creators will receive additional contribution bonus when their technical proposals result in royalties and other benefits. Furthermore, a reporting reward will be given to the colleague who discovers and reports to Brogent Group that its patent has been infringed by a third party.

3. Potential Intellectual Property Risks and Response Measures

Brogent Group is a leading developer of flying theater and continues to develop various types of immersive experience entertainment apparatus. Competitors in various countries often reference and imitate Brogent Group's key apparatus and core technologies. Brogent Group thus constantly monitors the technological developments in the immersive experience entertainment industry to understand and analyze the threats and impacts posed by competitors to our immersive experience entertainment apparatus, key technologies, and auxiliary technologies. Additionally, Brogent Group has established a process for patent portfolio analysis and design around recommendations for new technological concepts which help to solidify its dominant position in the immersive experience entertainment industry with the support of patents.

4. Regular Reporting

Brogent Group reports the intellectual property inventory and achievements to the Board of Directors each year.
